Construction of Jet Planes at Junkers, Dessau

25X1

1. The JU-132 and JU 137 described below are stated to be improved models of the JU 129 and JU 128, which were in the experimental stage at the time of the German capitulation.

2. The JU-132 is a long range bomber with six 302 units mounted in its wings, and improved Ju 287. [REDACTED] 25X1 This should most likely read Ju 132; [REDACTED]

[REDACTED] One Ju 132 bomber is under construction after the completion of all wind tunnel experiments. It is expected to be finished in December 1946; the test flight is scheduled for May 1947. The armament of the plane will not be smaller than the 30 mm cannon.

3. The JU 137 (sic, most likely Ju 137) is powered by two 004 jet turbines mounted under the tail. The speed is expected to be 1,000 kmh. It will be armed by 30 mm cannons of unknown number. The Germans plan to equip the plane with higher caliber armament for use against tanks. The wind tunnel experiments are concluded. The plane is scheduled to be completed on 15 January 1947.
